

Möhlenhoff represented as an exhibitor at Light + Building:

The Alpha IP smart home system ensures enhanced energy efficiency and comfort

Salzgitter, January 2018 – At Light + Building, the world's leading trade fair for lighting and building technology, which will be held from 18th to 23rd March 2018 in Frankfurt am Main, Germany, Möhlenhoff will be presenting selected products from its extensive portfolio. True to the event's flagship theme “Connected – Secure – Convenient”, the heating, ventilation and air conditioning specialist will be showing off the extended product portfolio making up its OEM Alpha IP intelligent smart home system, together with a number of other solutions.

With Alpha IP, Möhlenhoff is exhibiting a home automation system that offers OEM customers the ideal entry-level solution for the growing “Smart Home” market. All heating systems, from surface heating systems through radiators and on to electric heating, can be optimally regulated and conveniently controlled using this intelligent system. Taking the key theme of heating as its starting point, the company will this year also present not only security and lighting components but also shading solutions. The overall system has a modular structure and can be individually extended as required – for example with new intrusion detection systems or components for the measurement of consumption or for controlling roller shutters or blinds. One great advantage lies in the system's user-friendly design and intuitive operation. Users can operate the system easily and conveniently via a free app installed on their smartphones – or using voice control. Alpha IP increases indoor comfort, offers outstanding reliability of operation and tamper protection and provides considerable potential energy savings and the guarantee of an investment that will prove its worth in the future.

OEM Alpha 2: system will also be on display at the exhibition stand. This is a universal room-by-room controller for heating and cooling applications. It is available as both a BUS and

radio-controlled variant. Users can operate it quickly and easily in the home network or over the Internet using a laptop, tablet or smartphone. Using Smart Home ready, the system can be easily integrated into an existing home automation system over an open XML interface. With the cabled OEM Alpha direct: system, it is possible to implement even complex room-by-room control solutions economically and reliably. The solution is suitable for both new constructions and modernization projects. In addition, visitors to the trade fair will also be able to see the OEM Actuator 5 series of thermal actuators. With power consumption of approximately only one watt, these are the most energy-efficient units of their type on the market. The Smart Valve Drive actuator for particularly small valve distances and Möhlenhoff's motoric actuator, the Motoric Valve Drive, round off the product portfolio.

Möhlenhoff at Light + Building 2018: Hall 9.1, Stand B65

Meta-Title: Möhlenhoff will exhibit solutions for the smart home sector at Light + Building 2018

Meta-Description: Among other things, the focus will be placed on the OEM Alpha IP smart home system. With this solution, Möhlenhoff is offering its OEM customers the ideal entry-level system for the emerging "Smart Home" market.

Möhlenhoff GmbH

Based in Salzgitter, Germany, Möhlenhoff GmbH is a supplier of products and systems for the heating, ventilation and air conditioning industry. The company specializes in the development and manufacture of solutions for electronic room-by-room temperature control, smart home technology and underfloor convectors. Möhlenhoff is the global market leader in the field of thermal actuators. Over a period of more than 30 years, the company has established itself as a reliable, expert partner for OEM customers in these sectors. In 2017, the company's 180 employees achieved sales of 46,2 million euros.
